"Telling as much a social, educational, and cultural story as
institutional history, this detailed account chronicles the
ideological patterns, internal and countrywide conflicts, and
student experiences at the University of Melbourne from 1850 to
1939. The daily life of staff, professors, and students are
recounted during times of turmoil and peace in Australia,

including the depression of the 1890s and World War I. The account offers a window into the pedagogical conflicts and research achievements of one of Australia's oldest continuing educational institutions." Volumes 1-26 include a supplement: *The University pulpit*, vols. [1]-26, no. 1-661, which has separate pagination but is indexed in the main volume. How has a theory of man as a social being to be formulated if we are to do justice to his individuality, to the subtle ways in which his love and hate compete within his relations with others and to the anxieties and resistances he shows when he seeks to change himself? To answer this question is the task which the author sets himself. After assessing Freud's basic principles, the author proceeds to make a uniquely comprehensive review of subsequent theoretical contributions to psychoanalysis with special emphasis on the work of Fairbairn and Melanie Klein. From a background of philosophy, theology and social studies, the author went on to take a personal psychoanalysis and to become a full time psychotherapist, and it is from this combination of wide knowledge and intensive work with people beset by conflicts in their relations with themselves and others that he evolves his views. Drawing on Titus 2, this classic book encourages both younger and older women to seek out godly mentoring relationships and experience the blessing of such spiritual mothering with the aim of producing fruit for God's glory. Includes Abstracts section, previously issued separately.

The motor neuron diseases (or motor neuron diseases) (MND) are a group of progressive neurological disorders that destroy motor neurons, the cells that control voluntary muscle activity such as speaking, walking, breathing, and swallowing. Neurological examination presents specific signs associated with upper and lower motor neuron degeneration. Signs of upper motor neuron damage include spasticity, brisk reflexes and the Babinski sign. Signs of lower motor neuron damage include weakness and muscle atrophy. Every muscle group in the body requires both upper and lower motor neurons to function. It is a common misconception that "upper" motor neurons control the arms, while "lower" motor neurons control the legs. The signs described above can occur in any muscle group, including the arms, legs, torso, and bulbar region. Symptoms usually present between the ages of 50-70, and include progressive weakness, muscle wasting, and muscle fasciculations; spasticity or stiffness in the arms and legs; and overactive tendon reflexes. Patients may present with

symptoms as diverse as a dragging foot, unilateral muscle wasting in the hands, or slurred speech. This new book presents the latest research from around the globe. This expanded and updated second edition is a practical text to aid radiation oncologists in evaluating and treating benign diseases. An introductory chapter by an eminent malpractice lawyer clarifies the medical-legal implications of the radiation treatment of such diseases, and this is followed by the various benign conditions in alphabetical order. In each case, a brief summary is followed by citations of pertinent literature in both explanatory tables and reference lists. Although a comprehensive review, it remains readily comprehensible and will be recognised as the standard text on the subject. Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves. This book provides a quick reference guide for clinicians in radiation oncology. It is designed to be an intuitive and easily reviewed study guide for board or maintenance of certification examinations, as well as a quick reference for residents and established radiation oncologists who need a refresher. The text begins with a general pearls chapter that radiation oncologists should consider in all aspects of their practice, including cancer visibility, dosing, counseling recommendations, and toxicity management. The subsequent chapters then delve into different cancer disease

sites, including pediatrics, central nervous system, head and neck, thoracic, breast, gastrointestinal, gynecologic, genitourinary, hematologic, soft tissue, palliative, and radiophysics/radiobiology. Within each chapter, each disease and its recommended approach is then summarized in only a few pages, allowing a focus on the most essential information. Bullet points, figures, tables, and images make for an intuitive reader experience. Recommendations are taken from the American Society for Radiation Oncology (ASTRO), the European Society for Radiation Oncology (ESTRO), and the National Comprehensive Cancer Network (NCCN). Planning guides for imaging, diagnosis, and staging offer readers a starting point in approaching each patient based on disease origin, and dosing guidelines then detail consideration for treatment methods. Each chapter additionally includes disease-specific pearls and key points to test the knowledge reviewed in the chapters. Experts in the disease sites from the United States serve as senior authors on each chapter. The authors include all diseases associated with radiation oncology training to ensure a comprehensive resource for exam studying and clinical care. Residents, trainees, and established radiation oncologists find this an ideal study resource for both board and certification exams, as well as an easily accessible aid during practice.
