web dec 28 2020 the graph of the parametric equations is given in figure 9 22 a it is
parabola with a axis of symmetry along the line $y = x$ the vertex is at $(0, 0)$ in order to shift
the graph to the right 3 units we need to increase the x value by 3 for every point

a function with a one dimensional input and a
multidimensional output can be thought of as drawing a curve in space such a function
is called a parametric function and its input is called a parameter sometimes in
multivariable calculus you need to find a parametric function that draws a particular
curve web
parametric plot 3d is known as a parametric curve when plotting over a 1d
domain and as a parametric surface when plotting over a 2d domain if the surface is
created from sweeping a straight line along a path it is called a ruled surface web
