Asian American women have long dealt with charges of betrayal within and beyond their communities. Images of their "disloyalty" pervade American culture, from the daughter who is branded a traitor to family for adopting American ways, to the war bride who immigrates in defiance of her countrymen, to a figure such as Yoko Ono, accused of breaking up the Beatles with her "seduction" of John Lennon. Leslie Bow here explores how representations of females transgressing the social order play out in literature by Asian American women. Questions of ethnic belonging, sexuality, identification, and political allegiance are among the issues raised by such writers as Jeanne Wakatsuki Houston, Bharati Mukherjee, Jade Snow Wong, Amy Tan, Sky Lee, Le Ly Hayslip, Wendy Law-Yone, Fiona Cheong, and Nellie Wong. Beginning with the notion that feminist and Asian American identity are mutually exclusive, Bow analyzes how women serve as boundary markers between ethnic or national collectives in order to reveal the male-based nature of social cohesion. In exploring the relationship between femininity and citizenship, liberal feminism and American racial discourse, and women's domestic abuse and human rights, the author suggests that Asian American women not only mediate sexuality's construction as a determiner of loyalty but also manipulate that construction as a tool of political persuasion in their writing. The language of betrayal, she argues, offers a potent rhetorical means of signaling how belonging is policed by individuals and by the state. Bow's bold analysis exposes the stakes behind maintaining ethnic, feminist, and national alliances, particularly for women who claim multiple loyalties. Investment criteria for agricultural and rural development projects. Economic impact of forestry projects. Economic analysis of watershed projects. Discounting proceduers for project appraisal. Neonatal seizures represent one of the most frequent neurological events in newborn infants, often reflecting a variety of different pre-, peri-, or postnatal disorders of the central nervous system (CNS). They are also a common manifestation of metabolic abnormality in newborn period and often represent the first sign of neurological dysfunction in neonates. They may be symptomatic or cryptogenic, herald subsequent epilepsy, can be associated with potential morbidity and mortality, and may be used as a factor in considering long-term prognosis. Despite the enormous clinical significance of these events, many aspects of their management are not well supported with evidence-based recommendations. These guidelines are intended to be of use for neonatologists, paediatric neurologists, paediatricians, general practitioners, nurse practitioners, nurses and other health professionals who may be in contact with infants experiencing seizures within the first 28 days of life (age up to 44 weeks postconception). The guidelines are framed so as to be applied by health care providers practicing in a wide range of health care facilities, from those

with limited resources to tertiary care centers. This work is an attempt to root Gestalt therapy – its theory and practice, in the phenomenology of Maurice Merleau-Ponty (1908-1961). It is not an attempt to fix this wonderfully versatile therapy in concrete or to subtract anything of its existential openness from it, but to give it a foundation and a philosophical framework from which it can operate and develop. Its point of departure is the wonderful, even awesome, gratuity of one's being: "I am given to myself." Lucy Nash has just finished up her sophomore year of high school and is anticipating an uneventful summer at her rural Georgia home. . . that is, until a weird twist of fate and physics takes her on a trip back through time to the year 1975 with Cameron Hall, a boy her age whose own time is thirty years into her future. Cameron is hoping to stop a series of child disappearances, one of which deeply affected his family, and ends up teaming up with his accidental "passenger" to solve the crime. But despite their access to resources from the future, can two teenagers resolve a mystery that has remained a cold case for over sixty years. . . and what impact will their presence in the past have on their own lives - and their own futures?

Healthy mental, emotional, and behavioral (MEB) development is a critical foundation for a productive adulthood. Much is known about strategies to support families and communities in strengthening the MEB development of children and youth, by promoting healthy development and also by preventing and mitigating disorder, so that young people reach adulthood ready to thrive and contribute to society. Over the last decade, a growing body of research has significantly strengthened understanding of healthy MEB development and the factors that influence it, as well as how it can be fostered. Yet, the United States has not taken full advantage of this growing knowledge base. Ten years later, the nation still is not effectively mitigating risks for poor MEB health outcomes; these risks remain prevalent, and available data show no significant reductions in their prevalence. Fostering Healthy Mental, Emotional, and Behavioral Development in Children and Youth: A National Agenda examines the gap between current research and achievable national goals for the next ten years. This report identifies the complexities of childhood influences and highlights the need for a tailored approach when implementing new policies and practices. This report provides a framework for a cohesive, multidisciplinary national approach to improving MEB health. Organ transplantation has revolutionized the treatment for end-stage organ failure. Immunosuppression is still a major approach currently used in the prevention and treatment of allograft rejection. Both editors Dr. Chen and Dr. Qian have been contributing to preclinical evaluation of immunosuppressants for more than 25 years in North America. Experts from the United States, Canada, the United Kingdom, China, Japan, Germany, Sweden, Hungary and Brazil contributed 23 chapters to this book, providing details of immunological basis in transplantation. They also describe six classes of immunosuppressive agents (calcineurin inhibitors, mTOR inhibitors, JAK-STAT inhibitors, antiproliferative agents, costimulation blockers and corticosteroids), as well as ischemia/reperfusion injury treated agents. Additionally, the new development of cell therapy in the induction of transplant tolerance is introduced. This book provides many important references for the research direction of novel immunosuppressants. Readers that will find this book useful include transplant physicians, surgeons, nurses, immunologists, pharmacologists, pharmacists, medical students, residents and trainees in transplantation. Since the discovery of vulcanization in the 19th century, rubber has been a major industrial product. Despite the commercial importance of the process, no comprehensive analysis of rubber mixing is currently available. This monograph is designed to fill that gap in the arsenal available for problem solving by the production engineer or the machine designer. Discussions about the nature of the emotions in Hellenistic philosophy have aroused intense scholarly interest over the last few years. The topics covered by the essays in this volume range from the classical background of Hellenistic theories, through debates on emotion in the major Hellenistic schools, to discussions in later antiquity. Audience: This first comprehensive treatment of the emotions in Hellenistic philosophy can be read with pleasure and profit not only by professionals in ancient philosophy but also all those who are interested in the philosophy of mind and its history. These exciting books use full-color, and interesting, realistic illustrations to enhance reader comprehension. Also include a large number of worked examples that provide a good balance between initial, confidence building problems and more advanced level problems. Fundamental principles for solving problems are emphasized throughout.
